Sunbird launches its iMessage for Android app, expecting you to trust it in the name of blue bubbles

ACTION STEPS

- ✓ Sunbird is back, promising iMessage features and blue bubbles for your Android phone.
- ✓ It aims for full iMessage: reactions, read receipts, and yes, those coveted blue bubbles.
- ✓ Sunbird spent years in a security-concern-filled beta. Now 'breathing life,' it asks for major trust. Would you risk private messages for blue bubbles? Comment below!
- ✓ The benefit: bridging Apple-Android. But without clear security fixes, proceed with extreme caution.
- ✓ Emerging from 'purgatorial beta,' no specific steps yet. Check official app stores or their website for availability.

PRO TIP:

Always scrutinize app permissions for anything handling your communications and personal data.
