

1 Minute Google

One Google tip every day

How I freed up 20GB of Google Photos storage with 5 simple steps

ACTION STEPS

- ✓ It's not just me! Google **doesn't make it easy** to identify duplicates. No built-in tool highlights those copies automatically. So frustrating!
- ✓ Always hitting your storage limit? Let me know in the comments.
- ✓ But here's hope: there **are** clever tricks to speed up clearing space. Google admits it's hard, but workarounds exist!
- ✓ So, watch for third-party tools or Photos updates. We need a proper duplicate finder! Fingers crossed for a future fix.
- ✓ Quick bonus: Since finding duplicates is manual, try a 'Review' album to tag photos for deletion. Organizes the chaos!

PRO TIP:

Because finding duplicates is so manual right now, try making a 'Review' album to easily tag photos you might delete later. It helps organize the chaos!
