

1 Minute Google

One Google tip every day

I finally stopped missing Android notifications by changing one hidden setting

ACTION STEPS

- ✓ But I found a way to stop the 'alert overload' by tweaking a few simple settings. It feels like I've finally tamed the beast.
- ✓ The key? Dive into your phone's notification settings. The article mentioned using 'simple settings' to cut down 'constant alert overload'.
- ✓ This isn't about turning everything off, but making sure your phone prioritizes what matters to **you**. Do your notifications feel like a constant battle? Let me know in the comments!
- ✓ No exact steps, but explore options that manage notification frequency and types. Look for 'Notification categories' or 'App notifications' in your main phone settings.

PRO TIP:

Don't forget to check app-specific notification settings directly from within the app itself for even finer control!
