

1 Minute Google

One Google tip every day

5 Android safety features you probably aren't using - and how to turn them on

ACTION STEPS

- ✓ Turns out, some of Android's *best* safety features need YOU to manually enable them. They won't protect you until you do.
- ✓ The official word: these vital safeguards offer huge protection for your data and privacy. So, have you ever actually gone looking for these? Comment below!
- ✓ Since exact paths aren't named, here's your task: dive into Android Settings. Check Security, Privacy, and App Permissions. Look for anything that's OFF and configure it!

PRO TIP:

Regularly check your app permissions for any suspicious access requests.
