Google Photos adds setting to disable shimmer, AI camera shortcut

ACTION STEPS

- ✓ Good news: Google Photos for Android just rolled out a new setting to disable that distracting shimmer effect. Finally, some control!
- ✓ This is part of a trio of small but mighty updates. If you're like me, you probably didn't even realize that shimmer subtly annoyed you until you heard you could turn it off.
- ✓ Did you even notice this shimmer? Or is it just me? Let me know below!
- ✓ The benefit? A cleaner, less visually noisy experience. Since this setting just rolled out, make sure your Google Photos app on Android is updated. Then check your app's settings for the option.

PRO TIP:

Google Photos has insane search capabilities - you can find photos by objects, text within images, or even specific places.
